

Project Name: SolarStream

Round: Series A

Date: Jan 2025

Executive Summary:

SolarStream is a decentralized energy trading platform allowing homeowners with solar panels to sell excess power directly to neighbors. We use a blockchain ledger to automate peer-to-peer (P2P) transactions, bypassing utility monopolies.

Market Opportunity:

The global renewable energy market is projected to reach \$2 trillion by 2030. Current grid infrastructure is outdated, and homeowners lose 60% of value when selling back to the grid.

Product:

- Hardware: Smart Meter Gateway (installs in 10 mins).
- Software: Mobile App for tracking generation and earnings.

Business Model:

We take a 5% transaction fee on every kW sold.

Current traction: 500 homes in Austin, Texas. \$10k MRR.

Risks:

- Regulatory pushback from major utility companies.
- Hardware supply chain shortages for chips.
- User adoption requiring behavior change.

Financials:

Asking for \$5M at a \$25M valuation to expand to California and Florida.
